

Stop Email Fraud Before It Starts: Protect Your Microsoft 365

The Threat of Account Takeover

Account takeovers are a significant cyber threat:

- Around **50% of all cyber incidents** involve email-based attacks.
- Businesses lose **over \$2.7 billion annually** (FBI 2024 report).
- Consequences include **financial losses, data breaches, and regulatory penalties**

Our Approach and Benefits

Risk Focused

Identify key vulnerabilities, signs of compromise, and offer actionable recommendations

Key Security Actions

Detect unusual account activity, check critical settings, and highlight improvements

Benefits

Reduce fraud risk, protect sensitive data, ensure compliance, and lower cyber exposure

Empower Leaders

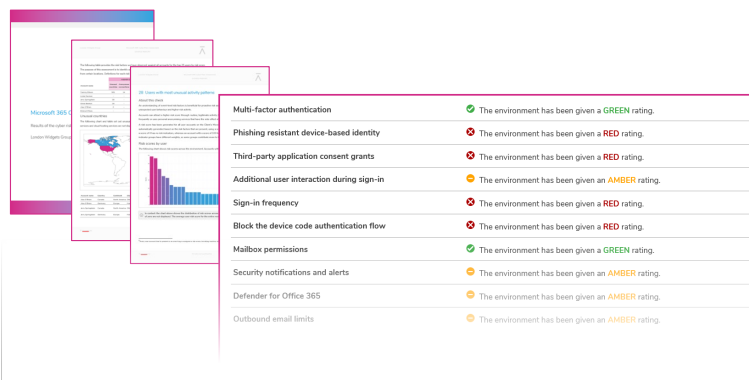

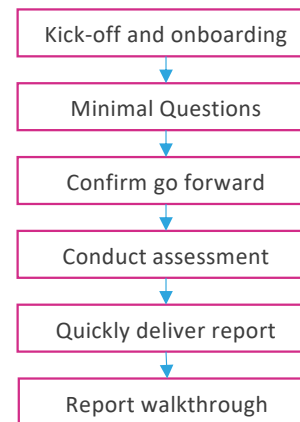

Provide clear insights for informed decision making

Comprehensive Yet Focused

A senior expert delivers a clear, concise report within a week or less of starting

Our Solution

MS365 is key to many businesses, holding sensitive and important data. The simplest and least expensive way to prevent account takeover is to harden it. We combine real-world incident experience with recommended best practices to find key weaknesses in your environment and provide practical fixes.

We deliver a **comprehensive report** covering system **configuration**, recent **activity**, and key **recommendations**

Why Choose Us

- 1 Driven by Real Threats**
Based on actual cyber events
- 2 Always Improving**
Continuously updated with new threats
- 3 Affordable and Valuable**
Proprietary tech accelerates review
- 4 Comprehensive**
In-depth report and walkthrough
- 5 Peace of Mind**
Detect active and historical compromises
- 6 Smooth and Simple Start**
Easy onboarding with a short online form
