

The Risk of XDR Misconfigurations

- XDR tools like SentinelOne and CrowdStrike are only as effective as their configuration. **Misconfigured XDR platforms** leave critical gaps across endpoints, networks and cloud environments.
- Attackers actively probe for **undetected breaches** and **delayed incident response**, with the potential for significant financial and reputational damage.
- Consequences include **misconfigured detection rules**, **disabled logging and coverage gaps**.

Our Approach and Business Impact

Risk Focused

Identify misconfigurations that create real business and compliance risk

Tailored Guidance

Platform-specific remediation steps, not generic checklists

Benefits

Reduce the risk of undetected intrusion, contain costs, and demonstrate due diligence

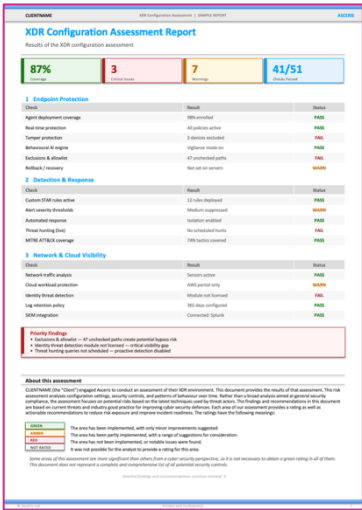

Expert driven

A senior expert delivers a clear, concise report and provides guidance

Our Solution

The **XDR Configuration Assessment by Asceris** evaluates the **SentinelOne or CrowdStrike** platform of the insured against best-practice benchmarks.

We identify misconfigurations that leave vulnerabilities and deliver tailored, prioritised guidance to reduce the attack surface and strengthen the insured’s security posture.

Why Choose Us

- 1 Incident Informed**
Findings grounded in real breach patterns
- 2 Platform Expertise**
Deep SentinelOne & CrowdStrike knowledge
- 3 Actionable Output**
Clear, prioritised remediation steps
- 4 Smooth and Simple Start**
Minimal effort required from the insured

We deliver a **comprehensive report** covering **XDR configuration, coverage gaps, and prioritised remediation guidance**
