

# Potential Catastrophic Loss List – ICD-10

## Guidelines for identifying potential catastrophic losses

The specific diagnoses listed below are key trigger indications of potentially catastrophic losses. In addition, the following acute medical situations warrant close review and may require case management consultation.

1. Transplants - liver, renal, heart, lung, pancreas, bone marrow and any combinations and transplant evaluation testing
2. Hospitalization of a covered person during the past 12 months including:
  - A length of stay request of seven (7) days or greater
