

Making a difference in our world

Risk Solutions & Sustainability

We believe that the private sector has a pivotal role in addressing sustainability and the challenges of climate change. Through more responsible business operations and practices, investing with impact, and developing innovating products and solutions using a sustainability lens, business can have an impact. We created the [QBE Environmental Sustainability Assessment Survey](#) with the goal of helping our customers learn more about how they can incorporate environmental management and sustainability into their own businesses.

The assessment is here to help our customers develop a better understanding of climate risks and sustainability and steps they can consider taking within their business. Invest 5 minutes to answer 10 questions and receive a free customized sustainability report for your business that will help you:

- Identify your organization's key environmental impacts
- Learn the foundations of sustainability
- Understand environmental sustainability motivations and their influence
- Investigate barriers to pursuing sustainability
- Receive actionable recommendations to incorporate into a sustainability action plan

QBE's Framework

Our Sustainability Framework helps us drive performance, manage risks and identify opportunities across the areas of sustainability that are most important to our business, customers and stakeholders. At QBE, we work hard to integrate sustainability into every facet of our operations. We believe this is essential to the long-term success of our business and our ability to give people the confidence to achieve their ambitions.

QBE is also committed to aligning our sustainability agenda with the [United Nations Sustainable Development Goals \(SDGs\)](#). In 2021, we refreshed our SDGs to ensure continued relevance to our business and stakeholders.

Our five SDG priorities reflect the areas that align to our purpose and strategic business priorities, including eliminating poverty, contributing to decent work and economic growth, reducing inequalities within and among countries, helping build sustainable cities and communities, and taking action to protect our climate.

Our purpose and strategic business priorities, including eliminating poverty, contributing to decent work and economic growth, reducing inequalities within and among countries, helping build sustainable cities and communities, and taking action to protect our climate.
